

[dokewiki](#), [plugin](#), [tagalerts](#), [todo](#)

Description

This plugin gives the possibility to activate different types of alerts for some specified tags (alerts are based on the same style than Dokewiki's system messages: error, info, success or notification).

Basic usage

Simply add the tags (as a comma separated list) to the option corresponding to the wanted tag alert.

Tagalerts	
plugin:tagalerts:inline	messages ▾
Tagalerts type	
plugin:tagalerts:error	draft
Comma separated list of tags that will trigger an alert based on system error message.	
plugin:tagalerts:info	
Comma separated list of tags that will trigger an alert based on system information message.	
plugin:tagalerts:success	
Comma separated list of tags that will trigger an alert based on system success message.	
plugin:tagalerts:notify	archive
Comma separated list of tags that will trigger an alert based on system notification message.	

Here is the result :

The screenshot shows the Dokewiki interface with two status messages at the top:

- A red message: "This page has been marked as draft."
- A yellow message: "This page has been marked as archive."

In the top right corner, there is a sidebar with the URL "doku:plugin.tagalerts en".

Below the messages, there is a blue circular icon with a white 'i' symbol. Inside a grey callout bubble, there is a bulleted list of instructions:

- A given tag should only be added to one alert type.
- If more than one tag on a given page are supposed to throw the same alert, only the first one (in the option) will be signaled in the message.

Personnalized alerts

It is possible to personnalize alerts according to the tag through the file `.../conf/tagalerts.conf` (you will have to create it or use [the Confmanager plugin](#)).

For example :

```
# blah blah blah
archive      This pages is marked as archived. It's content might be
outdated.
```

This screenshot shows a DokuWiki page with two inline alerts. The first alert, 'This page has been marked as draft.', is displayed in a red box. The second alert, 'This pages is marked as archived. It's content might be outdated.', is displayed in a yellow box. The page header includes 'doku:plugin:tagalerts' and 'en'. Below the alerts, there is a breadcrumb trail 'dokewiki, plugin, tagalerts, draft, archive' and a 'Table des matières' link.

« Inline » alerts

Instead of throwing alert messages, the plugin can apply the corresponding style to the tag link itself :

This screenshot shows a DokuWiki page with a dropdown menu for 'Tagalerts type'. The 'inline' option is selected, indicated by a blue border around the button. The page header includes 'doku:plugin:tagalerts' and 'en'.

Wich gives this result :

This screenshot shows a DokuWiki page with a tooltip for the 'archive' tag. The tooltip text is 'This pages is marked as archived. It's content might be outdated. (tag:archive)'. The page header includes 'doku:plugin:tagalerts' and 'en'.

If there's a personnalized alert for a tag, it will be shown as a *tooltip* on mouseover :

This screenshot shows a DokuWiki page with a tooltip for the 'archive' tag. The tooltip text is 'This pages is marked as archived. It's content might be outdated. (tag:archive)'. The page header includes 'doku:plugin:tagalerts' and 'en'.

Tooltip only

If you add a personnalized alert in .../conf/tagalerts.conf file without adding the tag to one of the categories in plugin options, the alert will be added as a tooltip to the link but no style will be applied.
